

Inflatable dock shelters with modular structure

As part of the integrated loading solution, **InterSeal™ S 620** is automatically actuated.

After actuating the door OPEN switch, the bellows of the S 620 are first inflated, and then the door opens automatically. At the end of the loading process, the dock leveller is first driven into resting position with the **AutoDock™** function, then the door is closed, an optional loading lamp is switched off, the S620 is vented and an exterior traffic light switches to green.

This automatic sequence increases efficiency, saves energy costs, and prevents possible damage caused by removing the lorry too early whilst the bellows are still inflated.

InterSeal	S 620
Width (NB)	3400
Height (NH)	3500 4700
Height (NH) yard level model	
Depth (NT)	800
Side bags (SP) width	600
Top bag (OP) height	1200
